ONLINE CHARITY SYSTEM

Himanshu Nagdive   16CO127
Hardik Rana   16CO138

AIM

Our Aim is to facilitate the distribution of donated items where they are needed .. It is a online platform for Indian Citizens to provide help to the needy people, built using the knowledge of Mysql taught in DBMS course.

OBJECTIVE

Leftover or unused items should be donated and not dumped in a dustbin. We accepts a variety of items as donations. These items will collected by the Local NGOs and distributed to charity trusts which are conducting distribution program amongst Indian citizens

DESCRIPTION (ABOUT THE PROJECT)

This project is aimed to ease the process of Donation. Nowadays most of the people have many unused or reusable which is no longer used by them. These item can be donated to needy people . To ease these donation process we will be creating an online portal which stores the person contact info and the items which the respective person has to donate. These items will be collected from the respective persons and distributed to other charity trusts that are stored in the database.
So in this way people can get an information about the donors without having to go to each and every donor or charity trusts.

FRAMEWORK

Framework : Django framework (html ,bootstrap and css as per needed) .

The database will be build upon MySql.
